

SHADOWS

Shadows are everywhere and they are vital to photography because this is the art of capturing light. With light comes shadows and when you begin to look at shadows as a photographer, your world will open up.

- Take a look around for shadows and record them with your camera.
- You could show the shadow as the total focus of the image. Or perhaps the shadow is incidental to the subject.
- Is the shadow natural or created by flash?

Shadows are integral to creating depth in a two-dimensional medium such as photography. Take some time to seriously explore the "dark side" of the light.
